

Badgers and Numeracy

Below are some activities that can be undertaken to develop numeracy skills

1. Draw a colour coded bar chart showing which food a badger eats in which month
2. Go badger watching at a local sett – (information available), record how many different badgers you see over the months. Draw a line graph to show the variation in numbers. Which months were there more/less badgers.
3. Draw a pie chart to show badger deaths and causes
4. Construct a graph showing the results gathered from the sorting keys
5. Construct a table/graph showing how many sett entrances you found during your visit. Perhaps visit the sett regularly – are there any changes in the number?
