

## Sorting out the badgers

What do the badger and fox have in common?

\_\_\_\_\_

They are both? \_\_\_\_\_

The Coal Tit and Dunnock are both? \_\_\_\_\_

They have \_\_\_\_\_ instead of fur

The slug has \_\_\_\_\_

The butterfly has something the rest do  
not \_\_\_\_\_

**Can you sort the animals using this box system?**

<b>Put each of the animals in the correct boxes</b>	<b>Has fur/hair</b>	<b>Does not have fur/hair</b>
<b>Feeds its young milk</b>		
<b>Does not feed its young milk</b>		

Now try and sort out your class mates?

**Can you sort them into:**

- a) Height
- b) Likes/dislikes
- c) Shoe size
- d) Colour of eyes

**How else could you sort your class?**

**Why not construct graph/tables to show your results?**

Badgers can be tricky to tell one from another, can you suggest a way we could sort badgers? This requires some thought as they are not as easy to divide as your class will be.

**What kind of things would allow us to tell one from another?**
